

Re: Group Processing Approach for Renewable Generator Connection Applications (CER/05/010)

Dear Mr. Naughton,

We have three Gate 1 Applications – DG 23, DG23a and DG24. Further to your proposed published costs, we have a preliminary budgeted cost of 2,900,000 euro, an increase of 1,000,000 euro on the pre-moratorium.

We are additionally facing a potential 1,000,000 euro to pay for a shared line. In the interest of fairness and least cost options, we should be allowed to build our own dedicated section and allow distribution to fit the metering equipment as is normal with distribution customers down stream. A cost saving of a minimum of 2,000,000 euro can be achieved.

Your comments please.
