

ESB Customer Supply

Seasonal Time of Day (STOD)

tariff & prices

for

Large Energy User (LEU) customers

1st October 2008 to 30th September 2009

Explanation of Changes to STOD Charges from 1 January 2009

The following should be noted in relation to the STOD prices set out in the following four tables [Medium Voltage, 38kV tailed, 38kV looped and 110kV]

STOD kWh Prices

(a) All kWh prices are reflective of forecast forward Energy prices in the Single Electricity Market. The energy component (Forecast SMP, Forecast Capacity Costs, Market Operator & Imperfections Costs) of the kWh prices is fixed for the pricing year, 1 October 2008–30 September 2009 and will not change.

(b) All kWh prices reflect the current values of TUoS and DUoS kWh charges as set out in EIRGRID Statement of Charges (30 /10/2007)& CER/07/191:Attachment 1 and CER/07/88.¹ These prices will be adjusted from 1st January 2009 to reflect revised TUoS and DUoS charges (subject to approval by the Commission for Energy Regulation)

(c) These charges will also be revised with the application of ESB's €300m rebate to all customers in Rol (expected to be a reduction of approx. €0.015/kWh).

STOD Non-kWh Prices

(d) The Non-kWh prices (Standing Charge, MIC Charges) will remain fixed until 31st Dec 2008, and will be adjusted on all four tables² from 1st January 2009 to reflect the following expected changes:

- i. Revised Supply Costs (subject to CER Approval)
- ii. Revised Distribution Charges (subject to CER Approval)
- iii. Revised Transmission MIC Charges (subject to CER Approval)

Prior Notification

ESBCS STOD Tariff customers will be informed of the changes to their tariff from 1st January 2009 in advance. The new prices for the ESBCS STOD tariff will be published on the CER website.

The changes above are expected to result in an increased standing charge and reduced kWh charge.
