Subject: Petroleum Safety Framework

Hi Eamonn,

I have read through the framework document and would like to add the following comments:

I feel the content is lacking in that there is no reference to Hydraulic fracturing for which exploratory licences have been granted. As this is a highly dangerous and un tested process it should be included. In relation to; Question 2, I feel 'Adverse effects' for any process should be included, not only Accidents - Environmental and human and animal health can be adversely effected without accidents happening.

Question 9, I feel the 5 points should be much more definate, responsibility designated it too vague.

Many thanks & best wishes,

Nuala
