Re: - Consultation on Installed Capacity Cap CER 13/2/10

Dear Nigel,
I would like to make a submission to the CER in regard to the above.

EirGrid's Connection Offer Policy and Process Paper (COPP), Up date on installed plant 13/08/2013 has the following on page 5 ***It is questionable whether over installation should be available retrospectively to Wind farms already connected***'.

Carrig Wind Farm LTD. Would like to comment as follows:-

We believe that it would be discriminatory not to allow the increased installed capacity for existing Projects. Allowing existing Projects to increasing installed capacity would seem practical from the following view points:-

- Efficient use of the Grid.
- Assist in meeting Government targets for Renewable Generation.
- Fair treatment of all Generators.

Carrig Wind Farm LTD supports the proposal to increase the installed capacity to 120% of the MEC. We also believe that this should take account of the Turbine size been installed.

Carrig Wind Farm LTD requests that when making their decision the CER applies the decision to all categories of Wind farm, i.e. new built and existing wind farms are treated equally.

There may be case for adjudication of the cap on a case by case basis by the CER.

Yours sincerely
Trevor Armitage
