Subject: Water Charges

I feel very strongly that the charge for water should be based on usage.
I live alone, and it appears that families and older people might get subsidised water, which means that I will have to pay more than my fair share.
When water charges were first proposed, we were told that too much water is being wasted, and charges would force people to be more careful with water. If the charge is not based on usage, then people have no incentive to stop wasting water.
So- I want my charge to be based on the amount of water that I use, on an equal basis with everyone else in the country. Fairness and equality are very important to me.
