Subject: Charge

To whom this may concern,

The current proposals for water are unrealistic and should be amended immediately. Families are already struggling with high costs on fuel, taxes and energy.

Current price proposals have made liars of the government.

People are nervous, with thoughts of having to find money for bills already.

With no access to view usage on a water meter, it's hardly about conservation.

Your current rates should be slashed by at least 50%. People are more likely to pay if there is a reasonable cost. To high... People will refuse.

On the grounds that current taxation, already goes towards water.

Regards
