Saorgus Energy Ltd comment on CER-15-284

Saorgus Energy Ltd in general welcomes the proposals in this paper. However, we make the following specific comments:

New capacity should be made available on the following basis:

- If there is spare capacity at the transmission node and
- No deep reinforcements are required and
- All non-procedural consents in place (i.e. planning and access to land title)

We caution against abandoning date order – this will result in counterproductive delays due to inevitable dissatisfaction among some existing holders of a place in the queue. In any case there will always be an overriding priority for projects needed for system security.
