

I wish to object to the proposed increase of the PSO levy as its more subsidies for an already OVER subsidised Wind Farm speculators.

The original Wind farm developers SSE Airtricity have themselves sold off many wind farms with most of their electricity now coming from their Great Island GAS powered ( extremely efficient ) power station.

Many other wind farm developers have traded in wind farms rather than a genuine effort to reduce Green house gasses. The actual benefit of wind energy is massively questionable as when the wind blows they have to be used by the grid even though other generators are still producing electricity which is being wasted just to give the false impression that wind is supplying energy . This is costing the consumers more as you are providing huge subsidies to these speculators from your ridiculous PSO levy which you now want to increase by a massive 40%.

Thank you,  
God bless,  
Milo Power
