

**Response by Energia to CER, Consultation,
CER/17034**

***System Operator's Proposal to Publish Additional
Information on Generation Applications***

23rd March 2017

1. Introduction

Energia welcomes the opportunity to respond to the CER consultation System Operators' Proposal to Publish Additional Information on Generation Applications. Energia is supportive of the proposals contained within the document and welcome the increased transparency and competition that they may bring. Energia contends that the steps taken here to address competition could be extended to opening up the works carried out by networks to competition.

Similar to the contention that divulging the additional information in this consultation will assist in more cost effective progress towards our 2020 targets, examining the potential to open network only system solutions to competition from developers could assist in making further gains in this area. This approach may reduce the cost and delivery time of certain system solutions. Energia would welcome a consultation or further discussion on allowing developers to compete with network owners.
