

Network Charges for Commercial Storage Units Interim Solution

Irish Energy Storage Association Response

The Irish Energy Storage Association welcomes the “Network Charges for Commercial Storage Units Interim Solution”. We particularly welcome the recognition of the importance of energy storage in transitioning to low carbon electricity and the need to remove anomalies in the market which discriminate against such plants.

We agree with the logic in applying DTUoS only, as this provides the best economic signals for maximizing the benefits of energy storage to the grid.

We welcome the proposal that the new arrangements will apply from next Oct. and we look forward to engaging constructively in consultations on the more comprehensive review of energy storage including network charging.
